

◆ 1. Problem Statement

To analyze weather data and understand temperature & humidity patterns.

◆ 2. Methodology

- Dataset loading
- Missing value handling
- Visualization (line chart, heatmap)

◆ 3. Visualizations

- Temperature over time graph
- Correlation heatmap

◆ 4. Insights

- Temperature shows high fluctuations with no clear trend.
- Humidity values vary independently in the dataset.
- There is a very weak correlation (-0.023) between temperature and humidity
- No strong pattern or relationship is observed between the variables.
